eliteCRETE®
EXPOSED

Milbrae EliteCrete® Exposed uses a variety of different stone, sand and cement combinations to create an attractive range of textured concrete for paths, driveways, pool surroundings and more.

EliteCrete® Exposed is created when a thin layer of sand and cement paste is washed off the top of wet concrete to reveal the natural colour, shape and feel of the aggregates.

Milbrae EliteCrete® decorative concrete range offers a unique set of colour and texture combinations to compliment any building or landscape setting.

- Required date and time

- Required delivery rate: cubic metres per hour

- Any special product needs: e.g. accelerator, fibres or superplasticizer

- Any special performance needs: e.g. non-slip or solid tyre traffic

- Testing requirement: e.g. slump, compressive strength

- Placement method: e.g. pump, kibble, wheelbarrow or chute

- Finishing method: hand or laser screed, machine or ride on trowel

- Site Access: e.g. narrow gate, steep road, powerlines, crossings or unstable ground

- Traffic Control: necessary if unloading while on public roads

- Price: delivered per cubic metre including GST

- Customer & payment method: account name or card number

Notes:
Detailed advice regarding concrete mix design and strength selection including proper placement, slab curing techniques and sealing is available at www.ccaa.com.au

Addition of extra water increases the water/cement ratio in the mix and thus weakens the concrete.

Safety data sheets for EliteCrete® products are available at milbrae.com.au

Proudly using 100% renewable electricity across our fixed quarries and concrete plants.

Switching to renewable electricity is part of Milbrae's Social Responsibility and Sustainability Policy. This switch has dramatically reduced Milbrae's overall environmental impact.

EliteCrete® Custom mixes allow Milbrae customers an opportunity to design and individualise their own exposed or polished concrete mix; the options are almost as wide as your imagination.

You can personally design Milbrae EliteCrete® Custom mixes to compliment the features of your home, office or show room.

Additional materials such as coloured glass, glow-in-the dark aggregate and other decorative or structural additives can be added in consultation with local Milbrae Managers. Polished Concrete also available – Contact your local Milbrae Manager for more information.

Milbrae EliteCrete® is made using naturally occurring materials which typically vary in colour, shape, texture, size and may contain organic matter. The final appearance of any EliteCrete® product is also significantly influenced by the concreter's placement techniques and workmanship. The addition of coloured oxides, concrete polishing and exposure techniques and workmanship also impact significantly on finished appearance. For these reasons Milbrae online and site samples are only indicative of the appearance and finish that is likely to be achieved. Milbrae do not guarantee the finished product will match the samples provided.
